

Recommended media identifier

ColorFlare consumables are manufactured directly for Intec. They offer class leading affordability, providing you with some of the most technically advanced laminate and foils available today, ensuring you the highest quality results on your litho graphic and digital prints.

Flaring foils and films - A range of coloured flaring foils and films to add special effects to your print

Intec Flaring Foils and Films

Description Our Premium Flaring Foils, will bond to any toner on the sheet enabling you to add metallic or other special effects to your print - ideal for high quality brochures, wedding stationary, labelling, packaging and so much more. They do not require the surface to be pre-treated and do not require the surface to be laminated. However if you wish to add spot metallic or holographic effects onto a printed page then you may need to print your image first, then protect this image with Intec's over printable digital laminate - so you can then over print the area of image that you wish to apply the foil or metallic effect to.

Specification

300 metre roll length
320mm (12.6") width
3" (77mm) core

Intec Flaring Foils

Can be over printed after imaging. Can be applied directly to printed image when laminating is not desired - i.e. where you print the metallic parts first - then the sheet can be over printed for the addition of other colours. Alternatively can also be applied to images placed on top of Intec over-printable laminates.
